Generically stable, \( \omega \)-categorical groups and rings

Jan Dobrowolski

Abstract

In two recent papers with Krzysztof Krupiński, we proved that every \( \omega \)-categorical, generically stable group is nilpotent-by-finite and that every \( \omega \)-categorical, generically stable ring is nilpotent-by-finite. During the lecture, after a brief overview of well-known results on \( \omega \)-categorical groups and rings, I will explain the main ideas of the proofs of our results.
