STATISTICAL CHARACTERIZATIONS OF GAUSSIAN MEASURES ON A HILBERT SPACE

Harald Luschgy

Abstract: Let $X_1, \ldots, X_n$ be i.i.d. random vectors with values in a real separable Hilbert space. We consider the problem of estimating the mean of $X_1$ under quadratic loss and discuss analogues of characteristic properties of normally distributed real random variables. It is shown that there exists an equivariant sufficient linear statistic iff $X_1$ is Gaussian. Further the optimality of the sample mean $\bar{X}$ in the class of all equivariant or unbiased estimators is a characteristic property of Gaussian random vectors.
